Selenium Webdriver Ui Testing Report

(On Personal Project- CARBONTRACK)

OVERVIEW:

In this project, I performed UI automation testing on my personal project, Carbon Footprint Tracker. The goal was to test basic functionality of the web interface using Selenium WebDriver. I automated the login process, handled the popup after successful login, and verified dashboard navigation after authentication.

TEST SCENARIOS:

- ***Test Case 1: Login Page Opened Successfully:*** Verifies the login page opens successfully
- ***Test Case 2: Email Entered Successfully:*** Verifies the email used is not invalid and is not an unverified email id; if unverified or not registered pop-up appears “invalid email”.
- ***Test Case 3: Password Entered Successfully:*** Verifies the entered password is correct.
- ***Test Case 4: Login Button Clicked Successfully:*** Once the email and password is verified login is done and pop-up appears “login successful”.
- ***Test Case 5: Alert Popup Accepted Successfully:*** Finally the alert is accepted and dashboard opens.

RESULTS:

```
Javadoc   Declaration   Console
<terminated> LoginTest [Java Application] C:\Users\Admin\.p2\pool\plu
Test Case 2: Email Entered Successfully
Test Case 3: Password Entered Successfully
Test Case 4: Login Button Clicked Successfully
Test Case 5: Alert Popup Accepted Successfully
All Test Cases Executed Successfully
```
